---	--	------------------------------------	---------------------------------------

— PROFILE

QA Analyst focused on API Testing, functional testing, regression, and E2E automation with Playwright. I use Postman daily to validate REST APIs, JSON payloads, status codes, authentication, integrations, and negative scenarios. For automation practice, I maintain a personal project that uses my Portfolio as the product under test, plus a QA Sandbox for login, filters, UI states, and mocked API responses. My previous background in L4 support, logs, Jira, and critical systems strengthens my ability to investigate issues, reproduce defects, and communicate clearly with development teams.

— QA DELIVERY STACK

Test APIs with consistency
Postman, REST, status codes, headers, tokens, payloads, contracts, positive/negative scenarios, and integration validation.

Automate demonstrable flows
Playwright applied to my own project, covering navigation, login, filters, API mocking, responsiveness, basic accessibility, and reports.

Document actionable bugs
Steps, evidence, severity, impact, expected/actual behavior, technical context, and objective communication.

Investigate real issues
DevTools, logs, Jira, reproduction steps, system behavior analysis, and hypotheses for development teams.

— EXPERIENCE AND PROJECTS

Personal QA / Automation Projects
Portfolio, QA Sandbox, and functional/API validation

01/2025 - Present

- Functional, exploratory, and regression testing in a personal project, focused on critical journeys, acceptance criteria, and evidence.
- Daily Postman use for API Testing across REST endpoints, JSON payloads, status codes, authentication, errors, and integrations.
- Playwright automation using the Portfolio as the product under test, covering web flows, smoke tests, interactions, responsive behavior, API mocking, and basic accessibility.
- Bug documentation with reproduction steps, expected/actual behavior, evidence, severity, and context for development.
- Use of Jira, Chrome DevTools, logs, Git, GitHub Actions, and Playwright reports to support triage, execution, and traceability.

Brooks Hamburgueria
Operations Coordinator

2018 - 2025

- Coordinated an average team of 10 people in a high-pressure operation, organizing priorities, standards, and execution quality.
- Created checklists, validation routines, controls, and process improvements to reduce failures and increase predictability.
- Built transferable QA skills: attention to detail, objective communication, urgency, and cause/impact analysis.

LINX
Specialized L4 support for corporate systems

2016 - 2017

- Investigated incidents and system behavior across ERP, POS, fiscal, retail, and food-industry integrations.
- Reproduced failures, analyzed logs, collected evidence, validated fixes, and communicated with development teams.
- Worked close to real production issues, strengthening test reasoning, impact analysis, and regression prevention.

Kairus Tecnologia
Operations and Systems Analyst

2014 - 2016

- Specialized support, system-flow analysis, and SaaS process automation to improve operational reliability.

PUBLIC PROJECTS

Rapha.QA Portfolio + QA Sandbox
Personal project used as a product under test for Playwright checks, with login, filters, UI states, mocked API, responsiveness, and execution summary.

Open portfolio

QA Sandbox
Controlled environment to practice login, filters, success, empty, and API-error scenarios without depending on a real backend.

Open sandbox

GitHub
Repositories, studies, and technical progress focused on QA, API Testing, Playwright, and automation evidence.
