QA Engineer

- Planned and executed functional, exploratory, and regression tests for web applications.
- Automated E2E tests using Playwright and Cypress.
- Validated REST APIs, integrations, and acceptance criteria.
- Investigated, reproduced, and documented bugs.
- Created test cases, evidence, and QA reports.
- Collaborated daily with Product Managers, Designers, and Developers in an agile environment.

Brooks Hamburgueria

01/2019 – 01/2025

Operational Coordinator

- Analyzed operational processes to improve efficiency, identify inconsistencies, and monitor performance indicators.
- Diagnosed operational failures and structured continuous improvement flows based on data and metrics.
- Standardized procedures, operational quality controls, and troubleshooting routines for critical processes.
- Managed teams with focus on operational consistency and adherence to defined processes.

Operational Analysis Performance Indicators Failure Diagnosis Continuous Improvement Operational Troubleshooting

LINX

06/2016 – 07/2019

L4 Support Engineer

- Analyzed and resolved critical incidents in complex enterprise applications.
- Investigated systemic failures in direct collaboration with development and architecture teams.
- Validated system behavior to identify bugs, inconsistencies, and regressions.
- Performed advanced troubleshooting using log analysis, functional diagnosis, and failure reproduction.
- Validated critical workflows before releases and production fixes.
- Identified integration inconsistencies and application behavior issues in enterprise environments.

SaaS CRM Enterprise Applications Web Systems Critical Operations Enterprise Support Retail Tech System Integrations

Operational Management Dashboard

- Responsive administrative dashboard built with HTML5, CSS3, and JavaScript.
- Manual testing, functional validations, and user workflow verification.
- Chrome DevTools inspection and cross-browser responsiveness validation.

QA Manual Front-End Debugging HTML5 JavaScript

Operational Workflow Validation App

- Interactive web application with LocalStorage data persistence.
- Validated UI states, edge cases, and interface behaviors.
- Exploratory testing focused on user experience and functional quality.

TECHNICAL HIGHLIGHTS

- › Investigation and reproduction of bugs in corporate web applications.
- › Clear technical communication across QA, support, and development teams.
- › Functional analysis with DevTools, logs, and behavioral system validation.
- › Analytical profile focused on troubleshooting, traceability, and system quality.
